#### **DETAILED ACTION**

# Specification

The substitute specification filed with claims 1-26 has not been entered because it does not conform to the provisions of 35 USC 371. Accordingly, the specification and claims filed are as in applicant's PCT publication of 3/29/01. Claims pending for examination are 1-21.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 1. Claims 1-4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 0850569.

'569 teaches a pet food containing inulin or chicory, which the patent teaches, improves gastrointestinal tract health of the pet by promoting the growth of lactic and bifido-bacteria. See page 1. Additionally, the patent teaches that the promotion of such growth, at the cost of pathogenic bacteria, has various

Art Unit: 1761

beneficial effects: prevention and treatment of diarrheoea, increased growth, improved ability to breed and enhanced health. See page 1, paragraph 2. See example 1. The diet contains cereal. Enhanced health would inherently increase the activity of the pet.

2. Claims 1-4 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by WO 99/22604.

'604 teaches a pet food containing chicory, which the patent teaches, improves gastrointestinal tract health of the pet by promoting the growth of colonic flora, i.e. the enhancement of beneficial bacteria. See page 1, paragraph 2 and page 5, lines 1-7 and page 6, lines 3+. Additionally, the patent teaches that the promotion of such growth, at the cost of pathogenic bacteria, has several beneficial effects, among which is the impact on the pet's overall health. See the claims and example 1. The diet contains cereal. Enhancement of the overall health of the pet would inherently increase the activity of the pet.

3. Claims 1, 3 are rejected under 35 U.S.C. 102(b) as being anticipated by EP 0862863.

'863 teaches that probiotics are beneficial for gastrointestinal tract health in pets. See page 1. The patent teaches that the probiotic microorganisms inhibit the growth of pathogenic bacteria and thus they are useful in treatment and conditions caused by pathogenic bacteria and furthermore, they inhibit the growth and activity of pathogenic putrefying bacteria and the consequent

Art Unit: 1761

production of toxic amine compounds. Probiotic micro-organisms activate the immune function of the host. Also see page 5, line 58 for claim 11 limitations. Improving GI tract health, inhibiting growth and activity of pathogenic bacteria and activating the immune function of the pet, would inherently increase the activity of the pet.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 7-10, 13-15, 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 99/22604 and EP 0850569 in view of EP 0862863, Shields et al. (US Patent 6156355), and Lowe ('Canine Nutrition', Biotechnology in Feed Industry, pages 275-287, 1988) and further in view of Bui et al. (US Patent 6596303) and Bockow (US Patent 5709855).

The WO and EP '569 patents are as discussed above. They teach that inulin or chicory when combined in pet food that contains cereal (example 1 in 'WO 604; page 1, line 41, example 1 in '569), in amounts as shown at page 4, lines 1-5, page 7, lines 1-9 in WO '604, page 1, lines 40-42, 44, 55-56, page 2, lines 44-45, page 3, lines 38-40 in EP '569, enhance health and the promotion of

Art Unit: 1761

lactic and bifido-bacteria at the expense of pathogenic bacteria, increase growth of the pet and help increase overall health. They do not teach that the dogs were elderly or that the feeding of chicory ameliorates joint stiffness. The patents do not teach the addition of long chain fatty acid.

EP '863 teaches that probiotic bacteria aids the inhibition of the growth and activity of pathogenic bacteria and they are useful in the treatment and conditions caused by such bacteria. The patent also teaches that the probiotic bacteria activates the immune functions. See example 5; and page 5, line 56 which discloses the cell numbers of microorganism used. Furthermore, Shields Jr et al. teach that the addition of probiotics and prebiotics in a diet for dogs is advantageous for gastrointestinal function. See cols. 11 and, 12 at lines 1-10.

It would have been obvious to one of ordinary skill in the art at the time invention was made that not only will such enhancement occur in all dogs, but also in dogs that are elderly. It would have been obvious that the benefits shown for all dogs would extend to benefit elderly dogs too because they too would experience overall health improvements, enhanced health benefits such as increased immune function and hence an increase in pet activity for such elder dogs also. Moreover, Lowe teaches that a reduced efficiency of the digestive tract occurs as a result of age and infection. See page 280. He teaches that treatment with probiotics aids states of infection with pathogenic bacteria. See page 280. The reference states that when gastrointestinal tract health is compromised, digestive efficiency is reduced and opportunistic pathogens have a rapid growth rate and this may lead to infections. It would have been obvious to

Art Unit: 1761

one of ordinary skill in the art that probiotics and/or prebiotics help the GI tract to maintain not only the health of the dog but also maintain the profile of a healthy, active dog, as taught by each of the EP and WO patents and reinforced by Shields, Jr et al.

Even though none of the references above teach that fatty acids are beneficial, Bui et al and Bockow establish that it was known in the art at the time the invention was made that a dog suffering from degenerative arthritis. tendonitis, etc, when treated with omega-3 fatty acid is considerably relieved from such a condition. See example 3, claims 1-6 in Bockow et al. Bui et al teach the administration of mussel extracts which are rich in omega fatty acids (see col. 3, lines 1-30) are beneficial to cats and dogs that are arthritic. The extract reduces inflammation exhibited in such conditions. See the claims. It would have been obvious to incorporate fatty acids in diets for pets that are suffering from conditions such as joint stiffness for the alleviation of the inflammatory response that accompanies such conditions. Furthermore, it would have been obvious to one of ordinary skill in the art to treat or ameliorate joint stiffness by adding probiotics or prebiotics because the primary references teach that these compositions reduce pathogenic bacteria and it is well known that such bacteria elicit an increased inflammatory status in the host (see instant claim 18).

#### **Prior Art**

Art Unit: 1761

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to C. SAYALA at Group 1761, telephone number (703) 308-3035.

The fax phone number for the organization where this application or proceeding is assigned is (703) 305-3599.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is 703-308-0661.
